9. Experiment: AI-Assisted Features & Zia Analytics in Zoho Creator

Aim

To explore and configure built-in artificial intelligence capabilities (Zia) and advanced analytics features within Zoho Creator for intelligent data querying, predictive forecasting, and automated insights. The application used is **Vehicle Service Lab**.

Overview

Zoho Creator integrates Zia (Zoho's conversational AI and analytics assistant) to empower low-code developers with natural language processing, automated chart creation, anomaly detection, and predictive analytics.

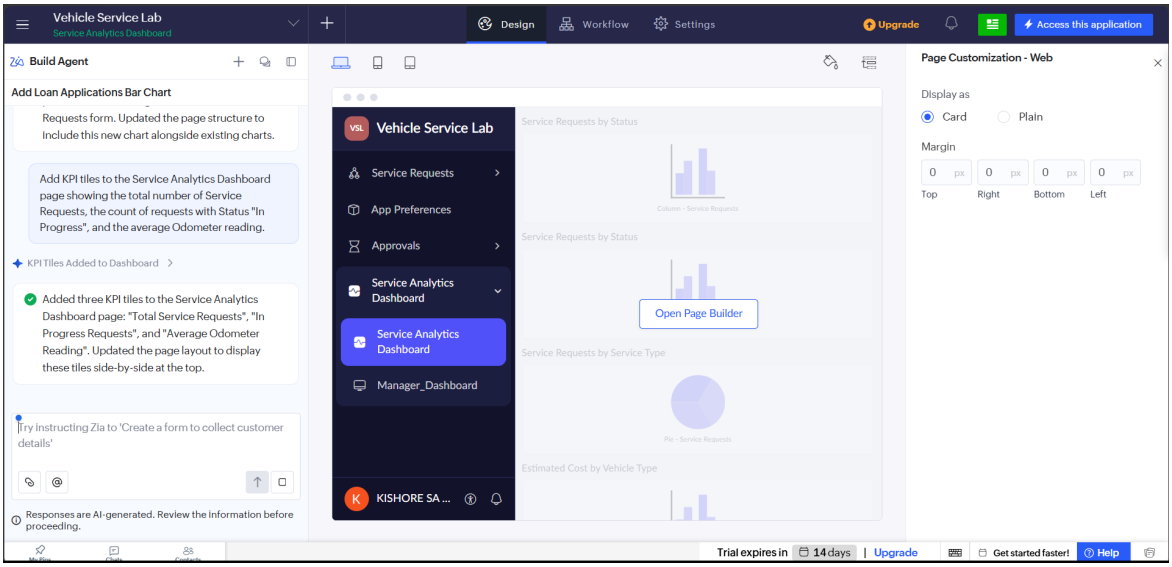

Feature / capability	Functional description in Zoho Creator
Zia Voice & Chat	Allows users to query application data and trigger reports via conversational commands.
Smart Analytics	Automatically suggests metrics, pivot tables, and visual charts based on dataset patterns.
Anomaly Detection	Flags irregular data entries, performance delays, or transaction spikes using machine learning.

Procedure

1. Open the Vehicle Service Lab application in Zoho Creator, click **Edit this application** and open the Zia **Build Agent** chat panel.
2. Generate the dashboard with natural language prompts: ask Zia to create the **Service Analytics Dashboard** page and to add charts on the Service Requests form, such as *Service Requests by Status* (bar), *Service Requests by Service Type* (pie), *Estimated Cost by Vehicle Type* (bar) and *Service Requests Over Time* (line).
3. Configure insights: ask Zia to add KPI tiles showing the total number of Service Requests, the count of requests with Status "In Progress", and the average Odometer reading.
4. Where the Build Agent could not complete a chart, create it manually in the Page Builder using the Service Requests form (Status on the X-axis, count of records on the Y-axis).
5. Open the application with **Access this application** and check that each chart and tile shows the data of the 20 sample service requests.

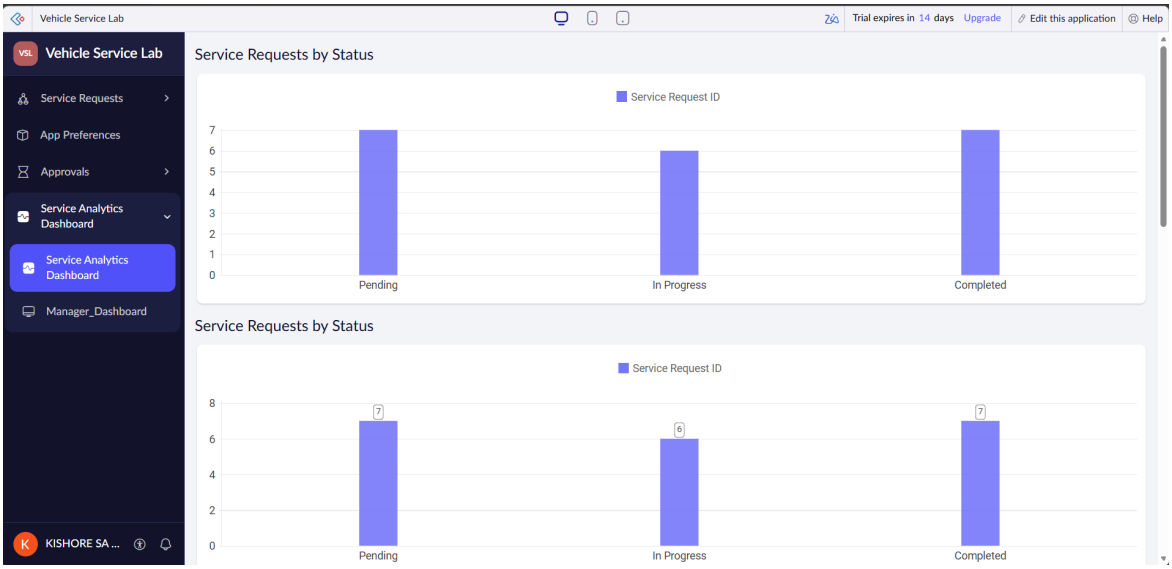

Screenshots:

Figure 1: Zia Build Agent and the Service Analytics Dashboard in the Page Builder

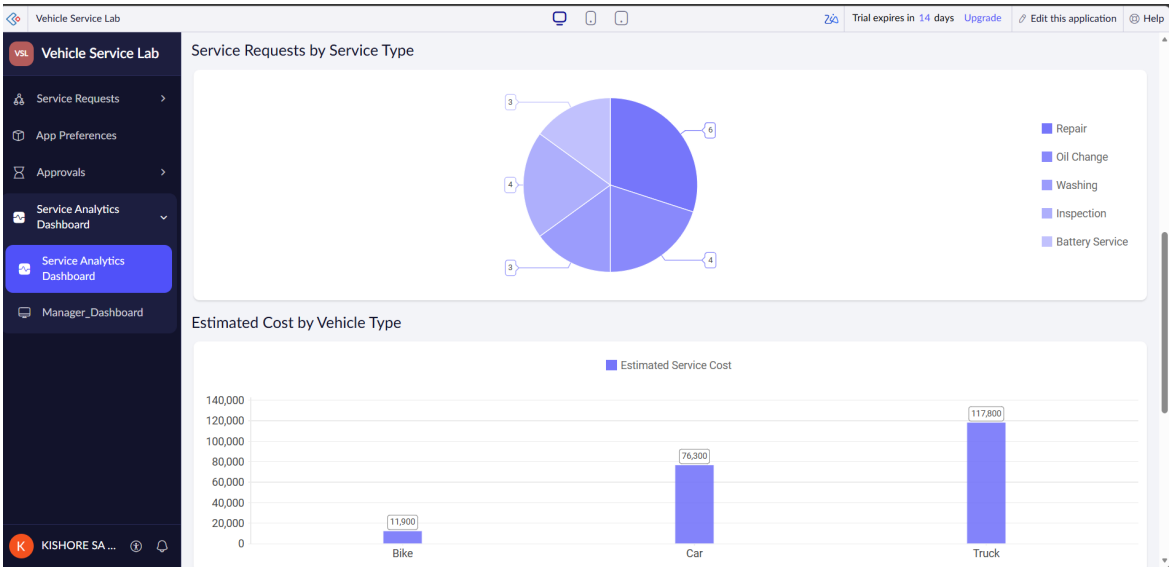

The Build Agent chat panel showing the KPI tiles request and its confirmation, next to the Service Analytics Dashboard page in the builder.

Figure 2: Service Requests by Status

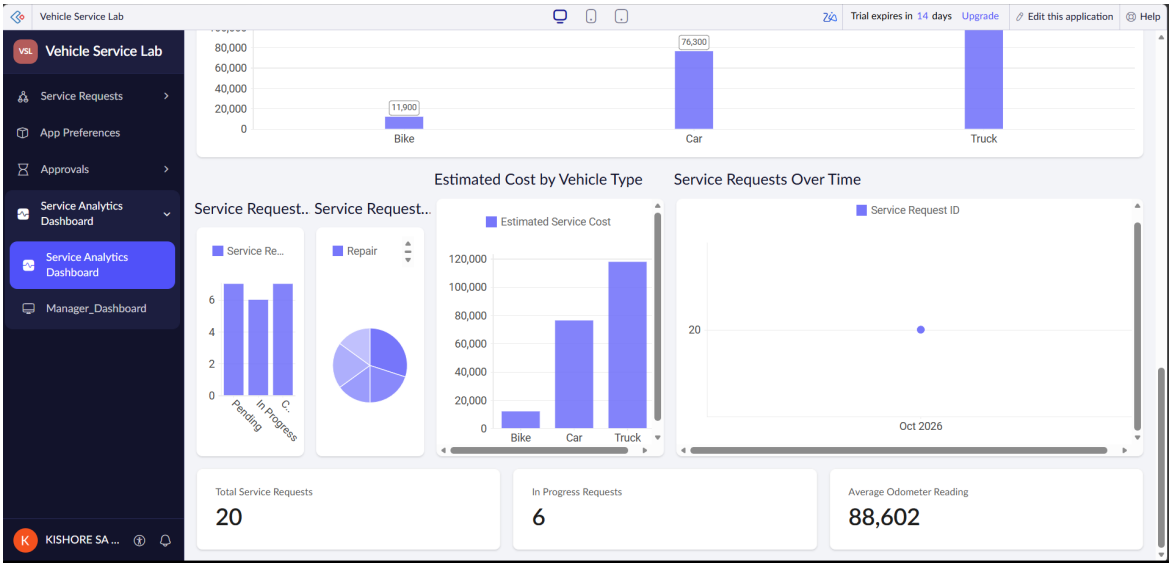

Bar charts of service requests grouped by Status: Pending 7, In Progress 6 and Completed 7.

Figure 3: Service type pie chart and estimated cost by vehicle type

Pie chart of requests by ServiceType (Repair, Oil Change, Washing, Inspection, Battery Service) and a bar chart of Estimated Service Cost by Vehicle Type (Bike, Car, Truck).

Figure 4: Requests over time and KPI tiles

The Service Requests Over Time chart and the KPI tiles: Total Service Requests 20, In Progress Requests 6, Average Odometer Reading 88,602.

Result:

AI-driven analytics were built with Zia in Zoho Creator for the Vehicle Service Lab application. Zia produced the dashboard charts and KPI tiles from natural language prompts, and any chart it could not complete was created manually in the Page Builder, giving automated business intelligence and natural language data exploration with little manual scripting.
